Sample School — Test Document

Chemistry — Class 7

Time: 2 hours **Maximum Marks: 50**

General Instructions:

1. Answer all questions.
2. Figures are for reference only.
3. Marks are shown against each question.

Section A — Multiple Choice

Choose one answer.

1. Which solution is acidic? [1]

(a) Soap water
(b) Lemon juice
(c) Baking soda
(d) Salt water

2. What is the smallest unit of an element? [1]

(a) Molecule
(b) Atom
(c) Cell
(d) Crystal

3. Which metal is liquid near room temperature? [1]

(a) Iron
(b) Copper
(c) Mercury
(d) Aluminium

4. What is the pH of a neutral solution? [1]

(a) 0
(b) 3
(c) 7
(d) 14

5. What is the chemical formula of water? [1]

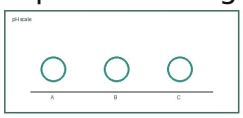

(a) H_2O
(b) CO_2
(c) O_2
(d) NaCl

6. Which change is reversible? [1]

(a) Burning paper

(b) Rusting iron
(c) Melting ice
(d) Cooking an egg

7. Use the pH scale diagram. Which number is strongly acidic? [1]

(a) 2
(b) 7
(c) 10
(d) 14

8. Which method separates sand from water? [1]
(a) Evaporation
(b) Filtration
(c) Magnetism
(d) Sublimation

9. Which gas is needed for iron to rust? [1]
(a) Oxygen
(b) Helium
(c) Neon
(d) Hydrogen

10. An acid reacts with a base to form salt and what else? [1]
(a) Oxygen
(b) Water
(c) Carbon
(d) Iron

Section B — Short Answer

Answer briefly.

1. State two properties of acids. [2]

2. What is an element? Give one example. [2]

3. Explain the difference between melting and dissolving. [2]

4. Fill the table with one use each for copper, iron and aluminium. [2]

Metal	Property	Use

5. Why is distilled water a poor conductor of electricity? [2]

6. Name two ways to prevent rusting. [2]

7. What does a pH value below 7 indicate? [2]

8. Explain what a solute and solvent are. [2]

9. Write the formula of carbon dioxide and water. [2]

(i) Write the formula for water. [1]

(ii) Write the formula for carbon dioxide. [1]

10. Give one sign that a chemical reaction has occurred. [2]

Section C — Long Answer

Explain your answer.

1. Compare physical and chemical changes with two examples of each. [5]

2. Explain neutralisation and give an everyday example. [5]

3. Describe how to separate a mixture of sand, salt and water. [5]

4. Explain the particle arrangement in solids, liquids and gases. [5]
