St Vincent Pallotti School

Unit Test-1

Chemistry — Class VI

Maximum Marks: 25

Section I — Question 1(a): Multiple Choice

Choose the correct answer.

1. Risa prepared lemonade, using sugar, lime juice and water. What kind of substance is it? [0.5]

(a) Elements
(b) Compounds
(c) Mixture
(d) Metalloid

2. The formula of calcium hydroxide is _____ [0.5]

(a) Ca OH
(b) Ca2 OH
(c) CA (OH)2
(d) Ca (OH)2

3. Which among the compounds contain 4 atoms of Hydrogen? [0.5]

(a) HCl
(b) NH Cl
(c) CH3Cl
(d) H2O2

4. Sodium derives its symbol from the Latin name _____-. [0.5]

(a) Zinken
(b) Natrium
(c) Cuprum
(d) Aurum

5. Sam wanted acid from the lab for his experiment. Help him in identifying the acid. [0.5]

(a) NH3
(b) HNO3
(c) KNO3
(d) KOH

6. An unreactive element found in the atmosphere is ___. [0.5]

(a) Nitrogen
(b) Chlorine

(c) Helium
(d) Hydrogen

Question 1(b): Short Answer

1. A liquid nonmetal. [1]

2. Radical with the symbol OH [1]

3. A trivalent metallic element. [1]

Question 1(c): Assertion and Reason

1. Assertion (A) Hydrogen is placed first in the periodic table. Reason (R) Atomicity of hydrogen is 2. [1]

(a) Both Assertion (A) and Reason (R) are true and Reason is the correct explanation of the Assertion
(b) Both Assertion (A) and Reason (R) are true but (R) is Not the correct explanation of the Assertion.
(c) Assertion is true but Reason is false.
(d) Assertion (A) is false but Reason(R) is true.

2. Assertion (A) Sodium is a non-metallic element. Reason (R). Non-metals are non-ductile. [1]

(a) Both Assertion (A) and Reason (R) are true and Reason is the correct explanation of the Assertion
(b) Both Assertion (A) and Reason (R) are true but Reason (R) is Not the correct explanation of the Assertion.
(c) Assertion(A) is true but Reason(R) is false.
(d) Assertion (A) is false but Reason(R) is correct

3. Assertion (A): Boron is a metalloid. Reason (R) Metalloids show both metallic and non-metallic properties. [1]

(a) Both Assertion (A) and Reason (R) are true and Reason is the correct explanation of the Assertion
(b) Both Assertion (A) and Reason (R) are true but (R) is Not the correct explanation of the Assertion.
(c) Assertion is true but Reason is wrong.
(d) Assertion (A) is false but Reason(R) is true.

Question 1(d): Chemistry

1. Zinc chloride [1]

2. Potassium nitrate [1]

3. Ammonium hydroxide. [1]

Question 1(e): Case Study

Read the passage and answer the questions.

1. Elements are the fundamental building blocks of matter, made up of tiny particles called atom. The periodic table organises these elements by increasing atomic number . Hydrogen has atomic number 1 and is placed first in the periodic table. It is the lightest and most abundant gas in the universe. Basic unit of an element is _____. [1]

2. Elements in the periodic table are arranged in the increasing order of their _____. [1]

(a) Mass number
(b) Atomic mass
(c) Atomic number
(d) Valency

3. Most abundant element in the universe is _____. [1]

(a) Nitrogen
(b) Hydrogen
(c) Oxygen
(d) Helium

Section II — Questions 2 to 4

Answer any 2 questions.

2. Answer the following parts. [5]

(i) Draw a structure of an atom and label the subatomic particles [1]

(ii) A metal commonly used in electrical cables Name the metal and give its symbol [1]

(iii) Elements in the periodic table are arranged in the increasing order of their atomicity (correct the statement) [0.5]

(iv) Give the atomicity for the given elements: 1.Gold 2. Chlorine [1]

(v) Identify the radical in the compound Calcium carbonate, write its symbol and valency. [1]

(vi) Give the chemical name of H_2SO_4 [0.5]

3. Answer the following parts. [5]

(i) State the symbol and valency of the given elements. 1.Potassium 2. Sulphur [1]

(ii) Give the number of atoms of each element in the compound. Sodium hydroxide [1]

(iii) Ozone is a molecule made up of three atoms, of _____(Fill in the missing term) [0.5]

(iv) Atomic number of carbon atom is 6 state the number of protons and electrons present. [1]

(v) You are given a box of elements. Pick out the metals and nonmetals from it. [Zinc, Sulphur, Phosphorus, Mercury, Carbon, Ferrum] [1]

(vi) Frying pans are made of Iron. Give reason [0.5]

4. Answer the following parts. [5]

(i) Name the property of Aluminium shown in the picture and define it. [1]

(ii) This gaseous element is commonly used in swimming pools to purify water. Name it and write its symbol. [1]

(iii) Ashok wants to study about hydrocarbons. Name the branch of chemistry he would choose? [0.5]

(iv) Phosphorus is made up of four atoms. Give its formula and atomicity. [1]

(v) Water is a compound. State one characteristics.to prove it. [1]

(vi) The chemical name of NO is _____. [0.5]
